PeaceHealth Medical Center, Bellingham
Providence Regional Medical Center, Everett
Regency-Omak
Swedish Medical Center, Seattle
COURSE DESCRIPTION AND FORMAT

For healthcare professionals in various care settings, including wound care team members, treatment nurses, staff nurses and nurse managers in acute care, long term care, ambulatory care and community-based settings.

This 30.0 contact hour course prepares healthcare professionals to practice evidence-based wound management with expanded skills and knowledge. Content is based on national wound management guidelines for a broad range of wounds. The course is a combination of two parts:

• Six Weeks Online Learning: The interactive online phase of the course is taken independently to establish a baseline level of knowledge for each participant. Assignments are completed and submitted online. Course content can be accessed 24/7.

• Hands-On Workshop: Following the online phase, participants attend a workshop that includes additional lectures, demonstrations and hands-on skill development. Individual registrants attend the workshop in Seattle. Registrants employed by a cosponsoring agency attend the workshop at the agency designated workshop location.

COURSE CONTENT

<table>
<thead>
<tr>

FROM A PARTICIPANT
“...This content should be part of every nursing program. Many nurses do not have any experience with wound care and seem frightened to take care of basic wounds, primarily due to lack of exposure to basic wound care.”

FROM AN AGENCY COORDINATOR
“Our educational funds are limited. Bringing education to the hospital so staff do not need to pay for travel and lodging is a great value.”
